BOARDS – RASPBERRY PI PICO

The Raspberry Pi Pico is the first of its kind featuring the RP2040 microcontroller with an dual-core ARM Cortex-M0+ designed in-house by Raspberry Pi and runs at up to 133 MHz. The RP2040 is supported with both C/C++ and MicroPython cross-platform development environments, including easy access to runtime debugging. It has native UF2 boot and floating-point routines, and the built-in USB can act as both device and host. The chip has 256KB RAM and 16KB ROM, and can use external flash, allowing users to customize memory as needed.
