

PCB OVERVIEW AND DESIGN TOOLS/SERVICES

Printed Circuit Board (PCB)

A PCB connects electronic components using conductive traces and pads. It is etched from one or more sheet layers of copper with layers of a non-conductive substrate in between. Below is a cutaway view of a 4 layer PCB.

EDA Tools

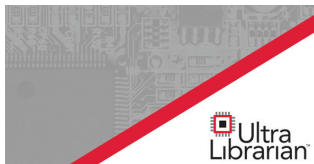

Order Bare PCBs with Digi-Key's PCB Builder... Introducing DK Red!

Upload a Gerber file and make a few selections to place a custom PCB order. Get quotes on bare boards from multiple board houses at the same time or leverage some fixed selections and save money with the low cost DK Red option.

Scheme-it® Ideation at its Best

Try Digi-Key's Scheme-it tool to kick start your ideas and design at the schematic block, board, or system level.

Symbols and Footprints

Ultra Librarian – EDA/CAD Model Libraries Made Easy

Automated and manual footprint, symbol, and 3D model creation with access to database of pre-built library parts that export to most CAD formats.

SnapEDA – Build Circuit Boards Faster with Instant Parts

Download free symbols and footprints for millions of electronic components. The largest source of verified parts.

KiCAD PCB Design Tool

Digi-Key's KiCad Symbol and Footprint Library

KiCad is an open source Electronic Design Automation (EDA) tool option that offers the functionality needed for most any project.
