

PROTOTYPING

Breadboards

A breadboard is a solderless platform that allows for electrical connections to be made internally. The most common breadboards have two isolated sides, each with their own vertical power rails that run the length of the board.

Breadboard Prototype

Want to learn how to breadboard? See our guide at: [DIGIKEY.COM/L2B](https://www.digikey.com/L2B)

Other Tools

These tools are used to semi-permanently prototype by soldering components.

Multimeter

Example part number:
614-1011-ND

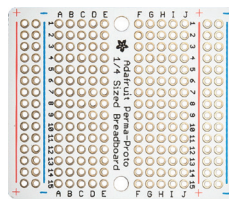

Jumper Wires

Example part number:
1528-1154-ND

Solder Station

Example part number:
